

WebService Enablement and Backend Integration (2nd week track)

Major theme of the 2nd week is the transformation of a Mainframe-Application into a Web-Service. Two project groups of approx. 10 - 12 students will each be responsible to design and implement a project by using the appropriate technologies: WdZ, RAD, CICS will be trained and used to create the application. By the end of the 2nd week the application will be presented to the trainers i.e. customers.
