

**WMQ Communication
Client/Server Connections**

WebSphere software

© 2007 IBM Corporation

IBM Software Group | WebSphere software

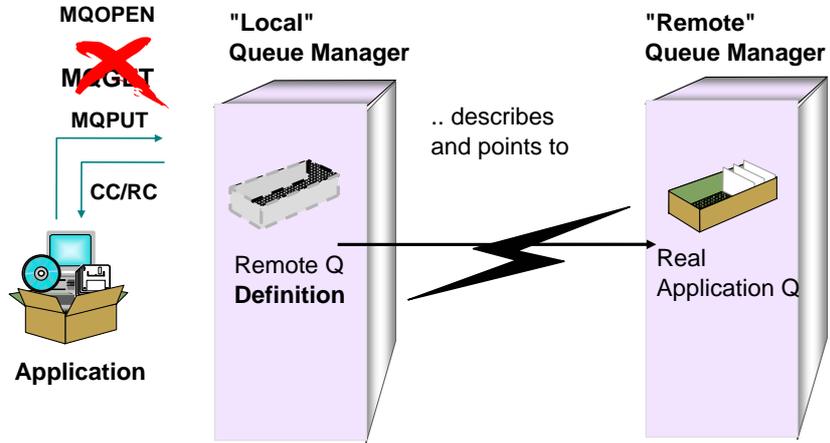

Overview

- Präsentation: WMQ Kommunikation mit Client- und Server-Verbindungen

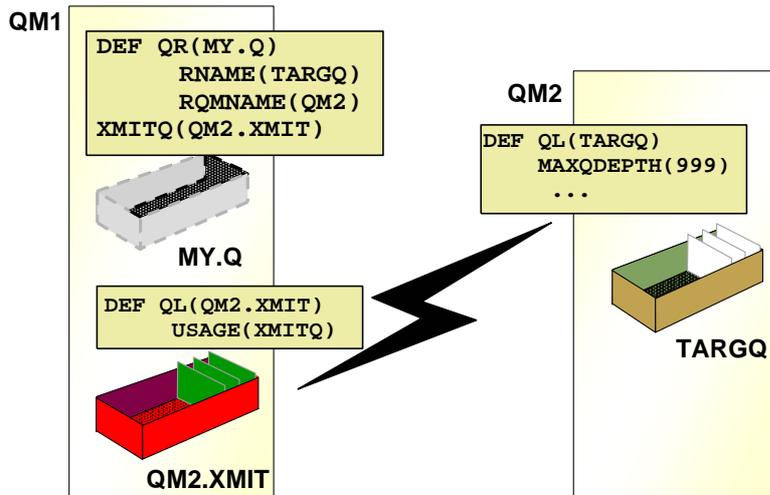

2

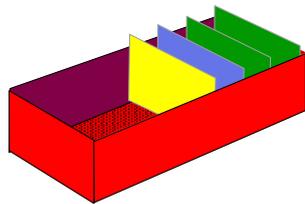

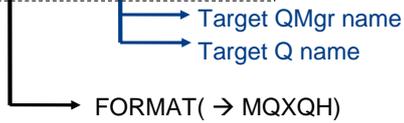

Remote Queues

Remote Queues

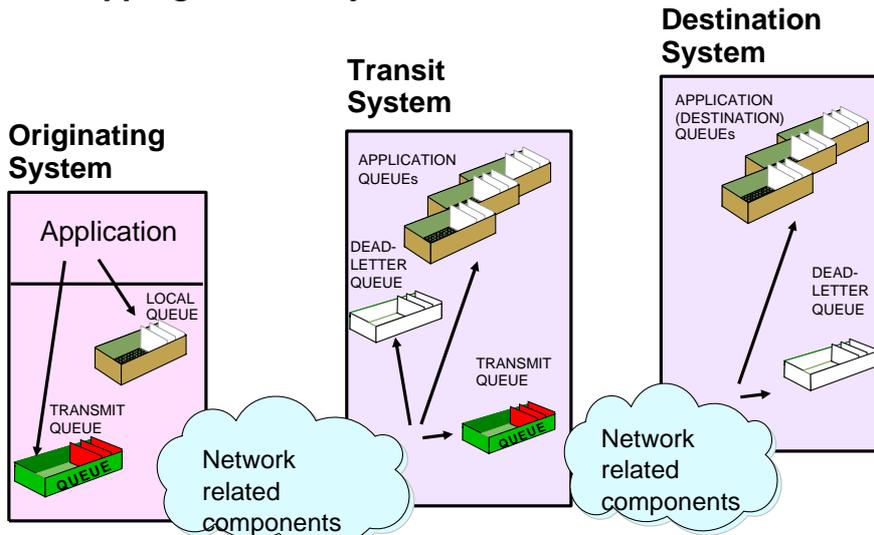

Transmission Header

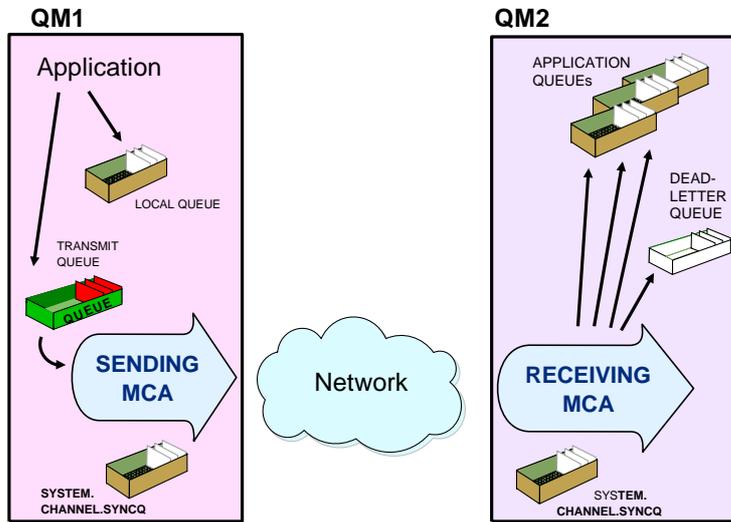

QM2.XMIT

- Messages on a Transmission Queue
 - may have multiple originators
 - may be for different destination queues
 - will be sent to one adjacent QMgr

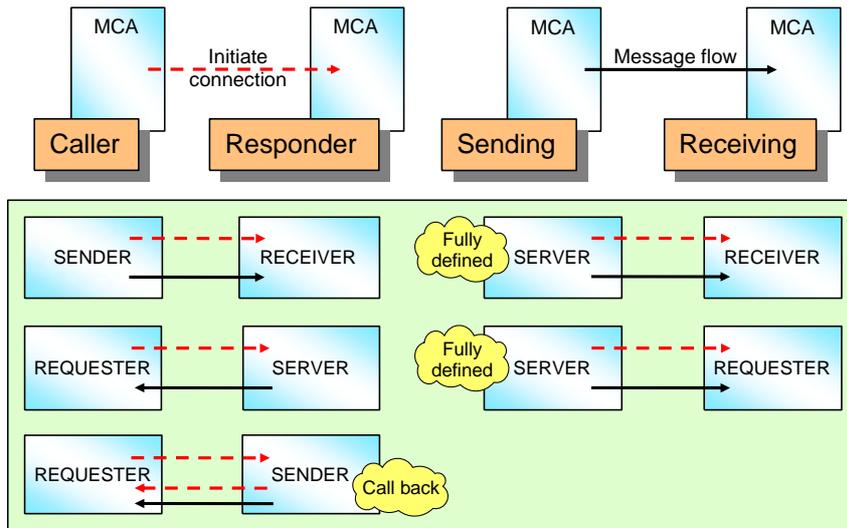

Multi Hopping- Transit Systems

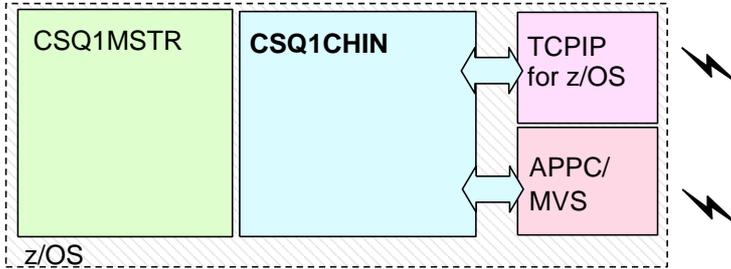

Connecting Queue Managers

MCA Types and Their Roles

WebSphere MQ Channel Initiator

```

SCSQPROC(CSQ4CHIN)
//PROCTSTEP EXEC PGM=CSQXJST,REGION=0M
//*****
//STEPLIB DD DSN=++THLQUAL++..SCSQANLE,DISP=SHR
// DD DSN=++THLQUAL++..SCSQAUTH,DISP=SHR
// DD DSN=++THLQUAL++..SCSQMVR1,DISP=SHR
// DD DSN=++LEQUAL++..SCSERUN,DISP=SHR
// DD DSN=++SSLQUAL++..SGSKLOAD,DISP=SHR
//*
//* SYSTEM INITIALIZATION INPUT DATA SETS *
//*****
//CSQINPX DD DSN=++THLQUAL++..SCSQPROC(CSQ4INPX),DISP=SHR
//CSQOUTX DD SYSOUT=++OUTCLASS++
//*
//* USER EXIT LIBRARY *
//*****
//CSQXLIB DD DSN=++EXITLIB++,DISP=SHR

```

9

Controlling Channel Initiator Startup

```

+CSQ1 START QMGR PARM(CSQZCSQ1)
...
+ALTER QMGR LUNAME(....) LU62CHL(n)
TCPNAME(....) TCPCHL(n)
TCPSTACK(SINGLE | MULTIPLE)
IPADDRV(IPV4 | IPV6)
+CSQ1 START CHINIT

```

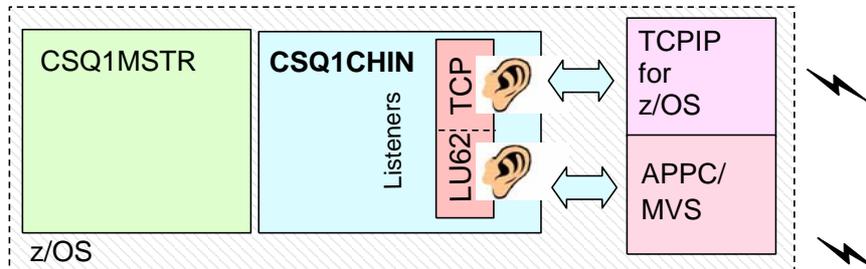

```

IEF403I GN39CHIN - STARTED - TIME=13.09.43
CSQX000I GN39 CSQXJST IBM WebSphere MQ for z/OS
CSQX001I GN39 CSQXJST Channel initiator starting
CSQX070I GN39 CSQXGIP CHINIT parameters ...
.....
CSQX011I GN39 CSQXGIP Client attachment feature available
CSQX141I GN39 CSQXADPI 8 adapter subtasks started, 0 failed
CSQX410I GN39 CSQXREPO Repository manager started
CSQX151I GN39 CSQXSSLI 0 SSL server subtasks started, 0 failed
CSQX015I GN39 CSQXSPRI 5 dispatchers started, 0 failed
CSQX022I GN39 CSQXSUPR Channel initiator initialization complete

```

10

WebSphere MQ for z/OS Listeners

```
+CSQ1 START QMGR PARM(CSQZPARM)
```

```
...
```

```
[+CSQ1] START CHINIT
```

contained in CSQINP2 data of
....MSTR procedure

```
...
```

```
[+CSQ1] START LISTENER TRPTYPE(TCP) PORT(2005)
```

```
[+CSQ1] START LISTENER TRPTYPE(LU62) LUNAME(MQ5CON)
```

contained in CSQINPX data of
....CHIN procedure

DISPLAY CHINIT

```
CSQX830I GN39 CSQXRDQM Channel initiator active
CSQX831I GN39 CSQXRDQM 8 adapter subtasks started,
8 requested
CSQX832I GN39 CSQXRDQM 5 dispatchers started, 5 requested
CSQX840I GN39 CSQXRDQM 28 channels current, maximum 200
CSQX841I GN39 CSQXRDQM 26 channels active, maximum 200,
including 0 paused
CSQX842I GN39 CSQXRDQM 0 channels starting,
1 stopped, 1 retrying
CSQX836I GN39 CSQXRDQM Maximum channels -
TCP/IP 200, LU 6.2 200
CSQX845I GN39 CSQXRDQM TCP/IP system name is TCPIP
CSQX846I GN39 CSQXRDQM TCP/IP listener started,
for port 7822 address *
CSQX849I GN39 CSQXRDQM LU 6.2 listener not started
CSQ9022I GN39 CSQXCRPS 'DIS CHINIT' NORMAL COMPLETION
```

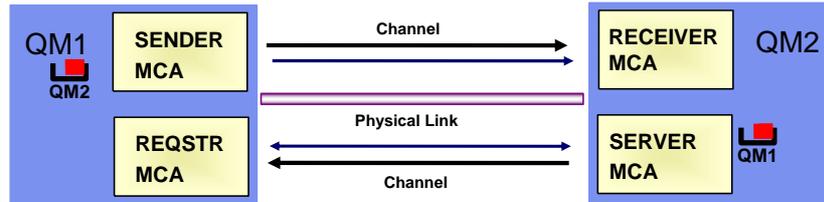

- ISPF panels: 1-Display/ Type=SYSTEM / 1-Distributed Queuing

Defining Channels

```
DEFINE CHANNEL(QM1.TO.QM2)
TRPTYPE(TCP) CHLTYPE(SDR)
XMITQ(QM2) CONNAME(qm2host)
```

```
DEFINE QL(QM2) USAGE(XMITQ)
```

```
DEFINE CHANNEL(QM1.TO.QM2)
TRPTYPE(TCP) CHLTYPE(RCVR)
```

```
DEFINE CHANNEL(QM2.TO.QM1)
TRPTYPE(TCP) CHLTYPE(RQSTR)
CONNAME(qm2host)
```

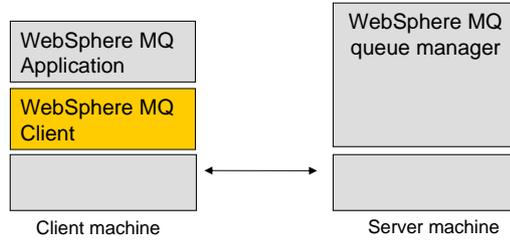

```
DEFINE CHANNEL(QM2.TO.QM1)
TRPTYPE(TCP) CHLTYPE(SVR)
XMITQ(QM1) CONNAME(qm1host)
```

```
DEFINE QLOCAL(QM1) USAGE(XMITQ)
```

Starting Channels

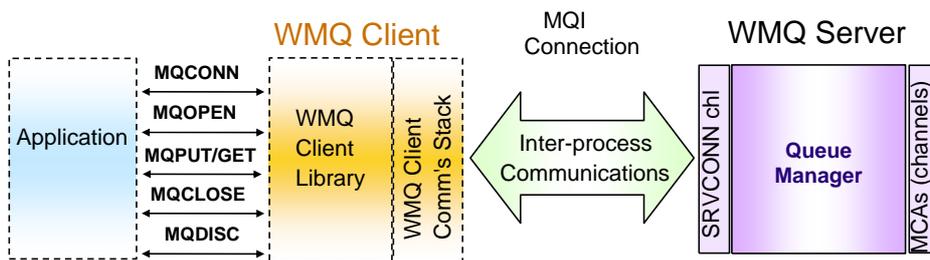

- **SENDER** automatically started through MQ triggering, with the associated XMITQ as the "originating queue" and the Channel Initiator acting as trigger monitor
- **RECEIVER** by the sender's ATTACH request through the local listener
- **REQUESTER** always by a START channel command - issued
 - by an application
 - by an installation supplied monitor
 - or manually
- **SERVER** by the requester's ATTACH request through the local listener, or by command (if fully configured)

What is A WMQ Client?

- A WMQ client is a component which can be installed on a system where no queue manager runs to enable the application to connect to the a queue manager, which is running on another system

What is A WMQ Client?

WMQ Platforms

AIX
 Compaq OpenVMS AXP
 Compaq OpenVMS VAX
 Compaq Tru64 UNIX
 HP-UX (including Stratus Continuum)
 Linux
 NCR UNIX
 OS/2 Warp
 SINIX and DC/OSx
 Sun Solaris
 Windows 3.1, 95 and 98
 Windows NT and Windows 2000

Both WMQ
 clients AND
 servers

z/OS (OS/390)

- Batch
- CICS
- IMS
- TSO

OS/400
 Tandem NonStop Kernel
 VSE/ESA

WMQ servers
 only
 -
 no client

DOS
 Java
 SunOS
 TPF
 VM/ESA
 ...

WMQ client
 only-
 no server

How the client connects to the server

- The application runs in **synchronous** because there must be a active connection between the client and server machine
- Issuing a MQCONN or MQCONNX call, establishes a connection via MQI channel and remains open until the application issues a MQDISC call

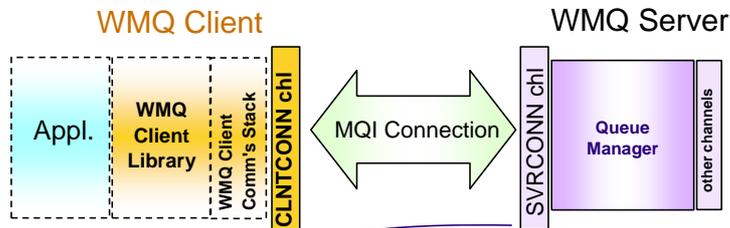

Extended transactional client

- A **WebSphere MQ extended transactional client** is a WebSphere MQ client with some additional function. This function allows a client application, within the same unit of work
 - to put messages to, and get messages from, queues that are owned by the queue manager to which it is connected
 - to update the resources of a resource manager other than a WebSphere MQ queue manager
- The unit of work must be managed by an external transaction manager like CICS, IMS or WebSphere
- the queue manager then acts only as a resource manager

Installation

- Install a WMQ client and a WMQ server system
 - Install WMQ server using the server CD-ROM
 - Install WMQ client using the client CD-ROM
- Install WMQ client and WMQ server on the same machine
 - Install WMQ server from the server CD-ROM
 - and select the WMQ clients you wish to install
- Install WMQ client from SupportPacs site
 - Download supportpac from <http://www.ibm.com/software/integration/wmq/support/>
 - Extract and run installation program

How To Connect Clients to Servers

If single server only:

MQSERVER=
chlname/trtype/conname

General method:

Client Definition File,
per default AMQCLCHL.TAB
MQCHLLIB=path to cd file
MQCHLTAB=cd file name

generate

DEF CHL(CLIENT.TO.MQ00)
CHLTYPE(SRVCONN)
TRTYPE(TCP)

DEF CHL(CLIENT.TO.MQ00)
CHLTYPE(CLNTCONN)
QMNAME(qmname)
TRTYPE(TCP)
CONNNAME(server.ip.address(port))

Determine The WMQ Server To Connect To

- Use the MQCONNX call with the MQCNO option
 MQCNO → MQCD Channel Defintion structure
 - Channel Name
 - Connection Name
- Use of the MQSERVER environment variable
 set MQSERVER=ChannelName/TransportType/ConnectionName
 - MQSERVER=SYSTEM.DEF.SRVCONN/TCP/127.0.0.1
 - MQSERVER=CLIENT.TO.MQ00/TCP/ls-europe.educmvs.ibm.de(2620)
 - MQSERVER=CLNT.TO.CSQI/LU62/A4OASMQI

3. Refer to an entry in the Channel Definition file

MQCONN(SALE) →

```

DEFINE CHANNEL(APLHA) CHLTYPE(CLNTCONN)
TRPTYPE(TCP) CONNAME(9.20.4.26) QMNAME(SALE)
DEFINE CHANNEL(BETA) CHLTYPE(CLNTCONN)
TRPTYPE(TCP) CONNAME(9.20.5.26) QMNAME(SALE)
DEFINE CHANNEL(GAMMA) CHLTYPE(CLNTCONN)
TRPTYPE(TCP) CONNAME(9.20.7.48) QMNAME(OFFER)
    
```

Client Sample Programs

- `amqsputc.exe` write (PUT) messages to named queue
- `amqsgetc.exe` read (GET) messages from named queue

- hit enter; MQCONN and MQOPEN is performed
- if successful, the program displays:
 - sample AMQSPUTC start
 - target qname is TARGET.QUEUE
- now type some message text and press Enter
- repeat for multiple messages
- press Enter twice after the last message
- the program displays:
 - sample AMQSPUTC end

Why use MQ Clients? Benefits

- No need for installing a Queue Manager on the client machine
- Hardware requirements reduces on client machine
- System administration reduced
- MQ Client Applications can connect to multiple queue managers on different systems
- The full MQI is supported
 - This enables almost every application to run on a WebSphere Client system using the MQIC libs
- But be aware of synchpoint coordination which needs to be handled by a external transaction manager, when using WebSphere MQ Client system
